

# Newsletter from Room 4

## September is well underway!

Our first four Stars of the Week are pictured above. Names are chosen at random, so that the process is entirely fair. The STAR leads our morning Opening with the calendar and The Pledge of Allegiance. He or she leads all lines, chooses helpers throughout the four days, and delivers any messages. The children contribute their positive comments about our Star before the new one takes over. We have had four great leaders already!

We all got two mealworms!

## Care of our creatures

We understand that all living creatures need air, water, food and a habitat. Ask us how we make sure these needs are taken care of.

## They have changed!

We know to observe carefully and be patient.

## Complete metamorphosis!

We have now witnessed in some of the mealworms the stages of larva, pupa and adult. We know that the adults mate and lay eggs. They only live for a few days. As one of our classmates remarked, "It's the circle of life!"

We Entomologists write about our observations. We have learned much from each other!

Please ask us what the characteristics of an insect are. How many legs? How many body parts and what are they? What about their special eyes? What sticks out of their heads and what are they for? Anything else?

NUMBERS NUMBERS all around! Making combinations for ten and writing numbers to 1,000! While we learn we work alone, with partners and in groups.

We are writers!

Each day we are learning more about the craft of writing.

We write about small moments in our lives.

We look forward to sharing our ideas and thoughts with our classmates.

We have lots to say!
